Amendments to the Claims:

This listing of claims replace all prior versions, and listings, of claims in the application:

<u>Listing of Claims:</u>
1-6. (Cancelled)
7. (Currently Amended) The system according to claim 1 A communications system
comprising:
a message engine adapted to handle differentiated message data, the message data
having assignable attributes;
at least one access to the differentiated message data;
repositories for storing the differentiated message data, wherein the message engine
includes a synchronization engine for synchronizing the differentiated message data
according to the attributes; and
an agent operable to homogenize the differentiated message data, the differentiated
message data being of one data type.
8-14. (Cancelled)
15. (Currently Amended) The method of claim 12 A method for providing access to
differentiated message data stored in a plurality of data stores, comprising the steps of:
assigning attributes to ones of the differentiated message data, the attributes having a
precedence;
maintaining lists corresponding to the message data stored in ones of the data stores,

the lists including the attributes assigned to the ones of the differentiated message data;

in response to a trigger event, comparing ones of the lists;

providing a synchronized list according to the attributes; and

updating ones of the data stores according to the synchronized list; wherein the lists further comprise message data identifiers, the data stores include at least a first data store and a second data store and the lists include a first ordered list corresponding to the message data stored in the first data store and a second ordered list corresponding to the message data stored in the second data store, the comparing step including the step of comparing the first ordered list and the second ordered list. 16. (Original) The method of claim 15 wherein the step of providing the synchronized list includes the step of excluding message data corresponding to message data identifiers in the second ordered lists that are not in the first ordered list. 17-18. (Cancelled) 19. (Currently Amended) The method of claim 12 comprising the further step of A method for providing access to differentiated message data stored in a plurality of data stores. comprising the steps of: assigning attributes to ones of the differentiated message data, the attributes having a precedence: maintaining lists corresponding to the message data stored in ones of the data stores, the lists including the attributes assigned to the ones of the differentiated message data; in response to a trigger event, comparing ones of the lists; providing a synchronized list according to the attributes; and

20. (Original) The method of claim 12 wherein the homogenizing step includes the step of generating the differentiated message data in one data type.

updating ones of the data stores according to the synchronized list; and

homogenizing the message data.

21. (Original) The method of claim 20 wherein the one data type is an e-mail data type.
